TUTORIAL ON TAKING PHOTOS

It's easy to take photos of different exposure with your own camera. All you have to do is follow the few easy steps of this tutorial. First, make sure your camera comes with a **manual mode (M)**. For more information, take a look at the FAQs.

1. Turn on the lights in the room.

2. Choose the best point of view in the room. Tidy up the room and put away all the personal belongings.

3. Put the camera on a table, or even better, on a tripod. The camera must not move during the whole sequence.

4. Put the camera on **manual mode (M)**.

5. Put the **White Balance (WB)** on **Automatic**.

6. Set the **ISO** to **100** or it's **lowest level**.

7. Set the **F** number to **5.6**.

We'll now take a sequence of 8 photos.

Improve your visibility

8.1 First, set the **exposure** to **1/2000** and take a photo.

8.2 Then, set the **exposure** to **1/500** and take a photo.

8.3 Again, set the **exposure** to **1/125** and take a photo.

8.4 Set the **exposure** to **1/30** and take another photo.

8.5 Set the **exposure** to **1/8** and take a photo.

8.6 Set the **exposure** to **0.5 second** and take a photo.

8.7 Set the **exposure** to **2 seconds** and take a photo.

8.8 Finally, set the **exposure** to **8 seconds** and take another photo.

9. You're now ready to develop your HDR photo in the **Exposio Dark Room**.
